# Cohort Assessment Report

This report (Cohort Data by Assessment) will show how a group of students have done over the last number of years.   Same group of students historically (Cohort).

Then click on **District Analysis** and then select the **Achievement Trend School and District Comparison** Report tile

Use the filters to select the grade you wish to look at.   The report only works for one grade at a time (Cohort). For this example, lets use the **Literacy (language arts proficiency)**, Select the **prior year** as there are no final marks yet select **Grades 7** in the filter, then **Literacy**, the sub assessment should be set to **RP-FIN** (Final Report card mark), Trend length can be **5 years** or your preference.
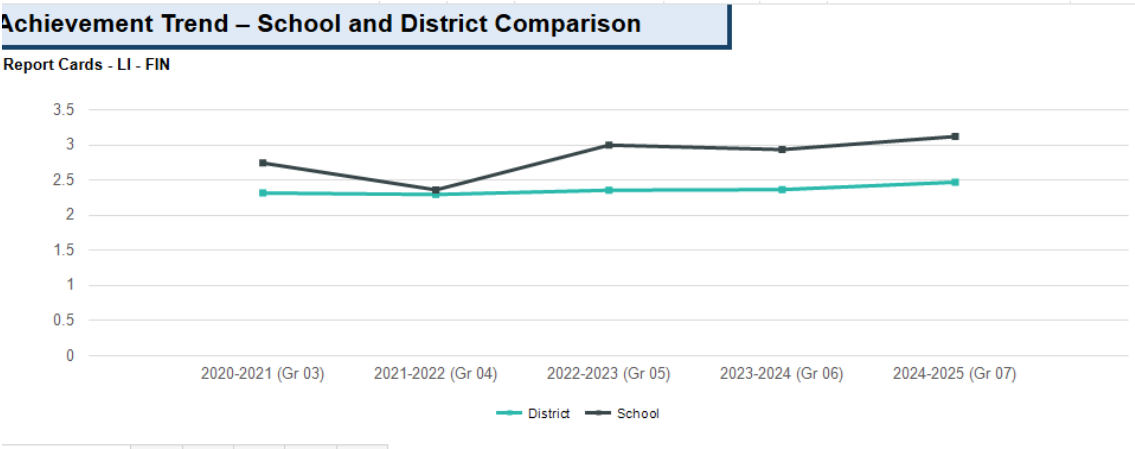

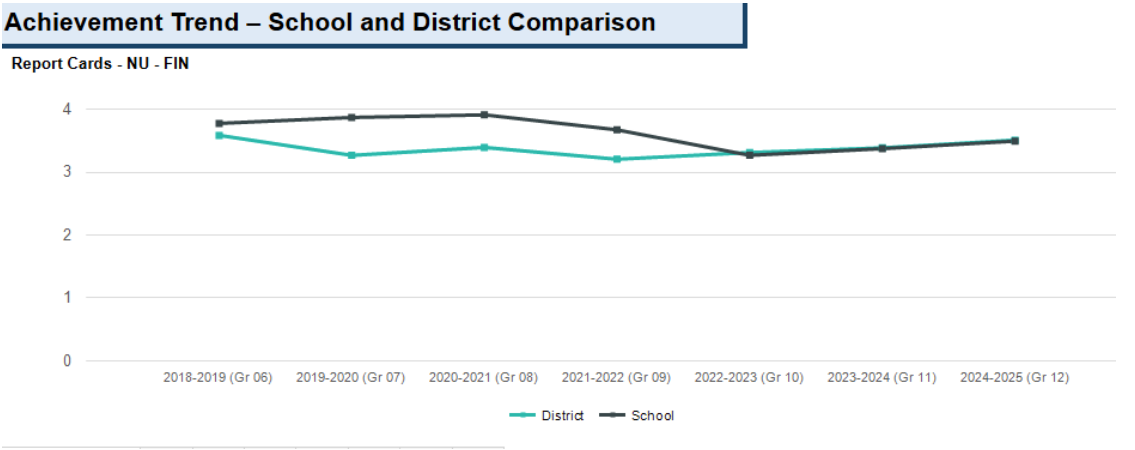

Then click **view report**

If you use an assessment with strand information you will need to select a sub assessment item (like Overall) to base the report from, in the PRA example (next page) the sub assessment item was DRA level only.

Save the Report to a PDF if you need to

Grade 7 Literacy Proficiency last five years.

Achievement Trend – School and District Comparison
