# Student Grade Assessment Report

This report, *Grade Data by Assessment*, displays performance trends over time for a specific grade level. It compares historical data for the same grade across different student cohorts, showing how achievement has changed year over year.

Then click on **District Analysis** and then select the **Achievement Trend per Grade** Report tile

Use the filters to select the grade you wish to look at. The report works for all grades within the same report. For this example, lets use the **Literacy (language arts proficiency)**, Select the **prior year** as there are no final marks yet select **all grades** in the filter, then **Literacy**, the sub assessment should be set to **RP-FIN** (Final Report card mark), Trend length can be **5 years** or your preference.

Then click **view report**

If you use an assessment with strand information you will need to select a sub assessment item (like Overall) to base the report from. The NFRA can be used this way with the Overall Sub Assessment item.

Save the Report to a PDF if you need to
